- Durability
- Exacting standards
- Flawless performance

Down to Earth and Out of this World

From NASA's Space Shuttle to the new breed of fuel-efficient jet transports, from railroad cars and tracks to tractor trailers, from bridge construction to ship containers, the application of Huck fasteners has ranged far and wide.

Born from many well-known and long-standing brands, Howmet Fastening Systems is the premier designer and manufacturer of aerospace and industrial fasteners, latches, fluid fittings and installation tools. Our products are used nose to tail on commercial and military aircraft, as well as on jet engines, industrial gas turbines, automobiles, commercial transportation vehicles, wind turbines, solar power systems, and construction and industrial equipment.

Howmet Huck® tools and fasteners are represented world-wide by trained distributors in most industrialized countries. Sales engineers and system specialists are located in your area to offer the assistance you require in solving your fastener problems. Please contact our office for the name and address of your local distributor.

Howmet Fastening Systems | Kingston Operations | 1 Corporate Drive Kingston, NY 12401 USA
